

PUBLIC TRANSPARENCY REPORT

2023

Quaero Capital

Generated 15-12-2023

About this report

PRI reporting is the largest global reporting project on responsible investment. It was developed with investors, for investors.

PRI signatories are required to report publicly on their responsible investment activities each year. In turn, they receive a number of outputs, including a public and private Transparency Report.

The public Transparency Reports, which are produced using signatories' reported information, provide accountability and support signatories to have internal discussions about their practices and to discuss these with their clients, beneficiaries, and other stakeholders.

This public Transparency Report is an export of the signatory's responses to the PRI Reporting Framework during the 2023 reporting period. It includes the signatory's responses to core indicators, as well as responses to plus indicators that the signatory has agreed to make public.

In response to signatory feedback, the PRI has not summarised signatories' responses – the information in this document is presented exactly as it was reported.

For each of the indicators in this document, all options selected by the signatory are presented, including links and qualitative responses. In some indicators, all applicable options are included for additional context.

Responsible investment definitions

Within the PRI Reporting Framework Glossary, we provide definitions for key terms to guide reporting on responsible investment practices in the Reporting Framework. These definitions may differ from those used or proposed by other authorities and regulatory bodies due to evolving industry perspectives and changing legislative landscapes. Users of this report should be aware of these variations, as they may impact interpretations of the information provided.

Data accuracy

This document presents information reported directly by signatories in the 2023 reporting cycle. This information has not been audited by the PRI or any other party acting on its behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented.

The PRI has taken reasonable action to ensure that data submitted by signatories in the reporting tool is reflected in their official PRI reports accurately. However, it is possible that small data inaccuracies and/or gaps remain, and the PRI shall not be responsible or liable for such inaccuracies and gaps.

Section 1. Our commitment

- Why does your organisation engage in responsible investment?
- What is your organisation's overall approach to responsible investment, and what major responsible investment commitment(s) have you made?

We believe that our industry must have a positive contribution to some of the world's most pressing issues and it drives our business strategy. In addition to this creed, we are also convinced that responsible investment has become one of the key areas where the financial service industry can drive the changes needed to overcome climate change. By being responsible stewards of the assets entrusted to our firm and directing savings towards firms determined to make societal improvements, we feel we are participating in the valuable goal of integrating more stakeholders' values in the framework of investment decisions.

In addition to this core philosophy, we believe that our clients will benefit from the integration of ESG criteria into our investment research, which will ultimately enhance their investment performance and mitigate their risk. Across our funds, we are convinced that integrating ESG factors into our financial analysis will support making better investment decisions for our clients. This is not just a question of ethics. By integrating these factors, we gain a better understanding of operational, financial, and reputational risks for a firm as well as business opportunities.

As a smaller firm, we have taken a pragmatic but meaningful approach to responsible investment. We have developed an ESG strategy with a strong focus on both corporate governance and Climate Change. We have also built a practical framework for fund managers and the ESG Team to engage companies. ESG integration varies between asset classes:

a. In our Real assets / private strategies: The investment time horizon for our investments in real assets is long, and our influence on projects is considerable; we usually take majority ownership positions. As a result, ESG analysis is a key part of our due diligence process and a factor in project selection. An assessment of the impact of these assets on key sustainability objectives is important. KPIs are collected on an annual basis for projects, using the SDG framework to identify those that are most material, and objectives are agreed over time to align the projects to contribute towards the achievement of the SDGs more meaningfully.

Climate change mitigation and adaptation form a core part of stewardship activities for real assets, both at the project investment stage as it relates to influencing the projects to shift to renewable energy sources and through management of the project post-investment.

b. Public equity □ Fixed income strategies follow an ESG integration based on a four pillar process: An exclusion policy excludes companies in severe breach of UNGC principles, involved in non-discriminatory weapons and companies as well as those with real involvement in the coal industry; In house evaluation of the material extra financial risks and opportunities in target companies; Continued engagement to management encouraging more sustainable practices and greater transparency; as well as exercising all voting rights when possible as we view proxy voting as integral part of our investment management responsibilities.

In 2022, we signed the Net Zero Asset Manager initiative as part of that commitment to the decarbonisation of the economy. This is a strategic priority for us, we are committed to working with the companies and assets that we invest in to align themselves with a 1.5-degree scenario. We continue to develop strategies and assets that invest in renewable energy and the net zero transition. This also translates into tangible efforts across all asset classes: from our close oversight of and commitment to energy efficiency in real estate assets, our significant investments in renewable energy through our private equity infrastructure funds, to engagement efforts with small cap companies on carbon emission reduction targets.

Section 2. Annual overview

- Discuss your organisation's progress during the reporting year on the responsible investment issue you consider most relevant or material to your organisation or its assets.
- Reflect on your performance with respect to your organisation's responsible investment objectives and targets during the reporting year. Details might include, for example, outlining your single most important achievement or describing your general progress on topics such as the following (where applicable):
 - refinement of ESG analysis and incorporation
 - stewardship activities with investees and/or with policymakers
 - collaborative engagements
 - attainment of responsible investment certifications and/or awards

2022 has been a year of increased regulations, with the second stage of the Sustainable Financial Disclosure Regulation (SFDR) bringing in significant complexities and reporting requirements for asset managers. At QUAERO CAPITAL we are very supportive of this new regulation; we believe the industry needed a framework under which to disclose the realities of their ESG strategies and philosophies. This regulation has been particularly challenging to navigate due to clarifications and evolutions which have been complex to monitor and implement. We hope that 2023 will provide a more stable regulatory environment under which we can focus again on effective ESG risk management, ESG analysis and driving impact.

We are proud to say that more than 60% of total AUM was invested in article 8 □ 9 according to SFDR regulation.

Impact is a priority for us; we want our policies and our strategies to ultimately have a positive impact on sustainability. During 2022, in our listed strategies, we launched a Net Zero Emission fund focused on investing in companies that we expect to have a material impact on decarbonising the economy across all sectors (targeting the most carbon intensive industries) and we also launched the Quaero BIO fund which has a commitment to invest at least 30% of AUM in green or social bonds. Moreover, we see the opportunity for impact as considerable in our real asset strategies, both through the selection of highly impactful assets through our infrastructure private equity funds (755 GWh of green energy was produced in 2022, up 9% since 2021, through our direct infrastructure assets in wind, hydro and solar), as well as through the effective management of assets to reduce environmental footprints and implement positive social policies across our infrastructure and real estate assets.

We also increasingly emphasise the importance of engagement across our funds. We focus in particular on climate impact in these engagements. 2022 was the fourth year of our involvement in the Carbon Disclosure Project (CDP) disclosure campaign, an annual campaign aimed at corporates to encourage greater transparency of climate risk and strategy from companies we invest in. In 2022, we expanded this effort to more of our equity funds, engaging with 45 companies globally across 8 of our funds.

We also expanded our engagement efforts with CDP to include disclosure requests for their questionnaires on water and forestry issues for those companies with significant exposure. At the end of the year, 14 engagements out of the 45 were successful, leading to disclosure to the CDP. We consider this to be a good result and recognise that often engagement is a multi-year effort as, for companies, it usually requires significant internal action before the right structure, governance, strategy are in place, and a complete set of data is available to reply coherently to the questionnaire. We conducted specific direct engagements on climate, supply chain and transparency with our small cap strategies.

Climate is a strategic priority for QUAERO CAPITAL, and this is an ever more pressing issue.

Extreme weather seen globally heightens awareness of investors, corporates and regulators alike, and we must play our role in accelerating efforts to decarbonise. We aim to offer full transparency of the impacts of the companies in our portfolios, including indicators such as carbon emissions in our reporting and measuring our own carbon footprint alongside. In 2022 we signed the Net Zero Emissions initiative and in 2023 we have committed to near term targets for our investments. Our focus will be on engaging companies to set Science-Based Targets. We think this is more important than restricting the emissions of our portfolios.

We have become more proactive in our voting activity, following the commitment of our climate policy and ensuring our votes are used more actively when companies are failing to sufficiently disclose or manage their climate risk and impact. We are also communicating our votes to companies ahead of the AGM when we are significant investors, and looking to improve the understanding of the governance frameworks that are guiding our voting decisions.

To demonstrate the rigour of our ESG approach, since 2021 we have been working on achieving the ISR label for multiple strategies. We are pleased to confirm that both our real estate Education Asset fund and our listed infrastructure fund, were certified with the ISR label in 2022, and we expect to add another strategy to this list shortly.

Lastly, we see that the quantity of reporting of extra-financial data and activity has increased significantly in recent years, adding complexity to the responsibilities of the ESG team. We are always willing to provide transparency and look forward to seeing how this extra information will be used by asset owners in their selection and monitoring processes.

Section 3. Next steps

- What specific steps has your organisation outlined to advance your commitment to responsible investment in the next two years?

Our focus is on our impact, and our capacity to influence companies in more sustainable ways alongside allocating capital to companies that have a greater impact on sustainability objectives.

We joined in 2022 the Net Zero Asset Manager initiative. As part of the Net Zero Asset Manager initiative, we have set targets using the Science-Based Targets initiative (SBTi) approach, setting targets for the proportion of our investments that have set their own approved SBTs. We chose this methodology as it focuses the energy of the investment and ESG teams on engaging with companies to integrate climate risk fully into their business models, and in doing so setting themselves greenhouse gas (GHG) emission reduction targets that are in line with the best climate science.

SBTs are reviewed and approved by the initiative, ensuring that the targets are sufficient to meet a 1.5-degree scenario.

In 2023, we set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner. This is a target for the proportion of investments that have set their own SBTs. The initial target is set for 2030 and will reflect a fair share of the 50% global reduction in CO2 identified as a requirement in the IPCC special report on global warming of 1.5 degrees.

We intend to increase our engagement across other themes alongside climate, with this as a specific objective for our newly launched Quaeronaut fund as well as an aim for other Quaero Capital funds. We also intend to continue to be more active in our votes, and to more often communicate the rationales directly to the company management teams ahead of the AGM.

(4) Description of the activity and what was achieved. For collaborative activities, provide detail on your individual contribution.

We took both a lead and cosignatory role for engagements with 45 companies across our equity portfolios. When lead investor this involved emailing the companies with an explanation of our request, and following up on their responses or in absence of a response. 14 engagements out of 45 were successful at the end of the year.

(B) Example 2:

Title of stewardship activity:

Carbon emission reporting

(4) Description of the activity and what was achieved. For collaborative activities, provide detail on your individual contribution.

We engaged five companies in our Argonaut portfolio regarding inadequate carbon emission and climate reporting. We contacted them each directly outlining the request and the importance of this data to us as investors. One of these conversations were escalated to the CEO and CFO, with who we held a conference call with the fund managers and ESG team present. We were provided with insights into their strategy on climate risk management and a timeline for their reporting.

Has your organisation identified climate-related risks and opportunities affecting your investments?

(A) Yes, within our standard planning horizon

Specify the risks and opportunities identified and your relevant standard planning horizon:

Climate-related risks and opportunities are identified at the individual investment and portfolio level. These are assessed through bottom-up analysis at the company level, and identified for those funds focused on climate opportunities at the portfolio level. This is made through exposure to 'green revenues' or 'eco-activities' for our investments in our climate-related portfolios. For real assets, climate-related risks are identified through the due diligence phase.

If you invest in pooled funds, describe how you incorporate responsible investment aspects into the selection, appointment and/or monitoring of external investment managers.

Provide example(s) below

(A) Selection

Our approach is based on prior Due Diligence work specific to ESG issues, at the Management Company level. This Due Diligence is illustrated by a proprietary ESG questionnaire, which results to a score. 4 pillars are assessed: 1/ philosophy and process (PRI signatory and other initiatives, % global assets concerned, product labeling, exclusion policy, monitoring of ESG processes) 2/ Resources (teams, amounts allocated, data providers, development of internal assessment tools) 3/ Implementation (voting policy, engagement policy, environmental objectives) 4/ Governance & ethics (possible sanctions, overall level of women and board, specific HR policies in promotion, employee involvement and motivation, training, sponsorship, university partnerships, charity). Equal weighting of the 4 pillars. This score is relative to the management company as a whole, including all asset classes. This score makes it possible to classify management companies into 4 categories: Leader, Committed, Effort, Laggard

A similar approach is carried out on each candidate strategy for investment, also integrating 4 pillars: 1/ ESG policy & investment process (SFDR, type of process, ESG rationale, changes) 2/ Teams 3/ ESG integration (internal score, evaluation method, impact on the evaluation, construction and management of the portfolio) 4 /Reporting & label.

This score makes it possible to classify the strategies from A to E (A being the best score) according to the degree of integration and quality. All strategies, including alternatives, are concerned.

(B) Appointment

At a minimum, the management company must be a signatory of the PRI. The Leader and Committed companies are preferred. When strategies managed by a management company classified as Effort or Laggard seem interesting to us, we initiate a dialogue policy with the management company to identify and share with them their possible weaknesses and capacity for improvement.

(C) Monitoring

The implementation of this score allows monitoring of management companies. The attribution of scores for each item assessed makes it possible to monitor the trajectory of each management company on each of the pillars considered. An unfavorable development leads to the opening of a discussion with the management company.

The questionnaire itself can be updated if regulations or major changes occur. During the last update of our questionnaire (2022) we notably added questions relating to SFDR (methodology, PAI, alignment policy, etc.), employee training policy and details on the engagement policy, its monitoring and impact. The questionnaire is developed in collaboration by the Multigestion team and the ESG team.

Describe an innovative practice you adopted as part of monitoring your external investment managers' responsible investment practices in a specific asset class during the reporting year.

Since 2020, we have implemented a reading of ESG issues through the identification of megatrends vectors of the transition towards a positive economy (identification of 6 main vectors of the "World of Tomorrow": modern consumption, infrastructures, renewable energies , digital revolution, health education, collaboration and communication)

We wanted to quantify this approach in order to assess the degree of alignment of each of the strategies invested and our consolidated portfolios with these megatrends. We have thus identified the three or four most appropriate SDGs per mega-trend. Based on the MSCI ESG data, we are therefore trying to assess the degree of alignment of the strategies with our reading of "The World of Tomorrow".

The objective of this approach is to have a homogeneous reading of the strategies without bias of asset class, theme or management style. In particular, it makes it possible to avoid a thematic management approach involving style, sector and concentration biases on a few issuers.

SAM 15	PLUS	OO 14, OO 21	N/A	PUBLIC	Engagement and escalation	4

Describe how your organisation engaged with external investment managers to improve their responsible investment practices during the reporting year.

When a management company, invested or to be invested, emerges with an internal “Laggard” ESG score, we systematically engage in dialogue with it in order to discuss with it possible points of improvement in the short and medium term. During the year under review, we participated in improving the practices of two of the three management companies concerned (resources and ESG implementation). For all management companies, we are particularly attentive to the evolution of ratings on our various assessment pillars. A confirmed unfavorable trend leads us to enter into dialogue with the management company(ies) concerned. As part of this approach, we seek in particular to identify whether the rating reflects poor communication or real weakness. In the event of a real weakness identified, we try to assess to what extent the management company really wishes to improve, in which case we invite them to enter into discussion, question them about their planned improvement plan and monitor the implementation.

Provide an example of how the incorporation of ESG factors in your listed equity valuation or portfolio construction affected the realised returns of those assets.

ESG factors are incorporated into investments in a case by case basis; our approach is qualitatively driven. We follow a bottom-up approach to ESG analysis, and where a factor is considered material we focus on research and evaluate the significance of the risk. This in turn affects the investment view and valuation. An example is a company with a diverse supply chain with poor monitoring for labour standards. This has affected our view and long-term valuation analysis for a company in the retail industry

Describe up to two processes you put in place during the reporting year to support meeting your targets on material ESG factors.

(A) Process one

To meet the requirements of the french law "Decret tertiaire", and aware of the importance of good energy management in our buildings, we decided to use the services of iQspot, which continuously collects and aggregates the data emitted by sensors installed on the meters (water, gas, electricity, heating/cooling networks, etc.). These sensors, which come from the world of IoT (Internet of Things), have an autonomy of several years and make it possible to find out remotely what is happening locally on the assets within EDUCATIO's perimeter.

By collecting consumption data in real time, the iQspot application can be used to view past and current consumption, hour by hour, by the day, week, month or year.

(B) Process two

For some of our buildings, we have carried out indoor air quality audits (measuring ambient temperature, humidity, CO, CO2 and particles) in order to determine the degree of criticality and compare them with reference values. We also carried out a programme of sampling and analysis of water quality for each domestic cold water network and each domestic hot water production system, in order to assess the risks of bacteriological contamination and chemical degradation of the water in our buildings.

Following the initial analyses, the Property Manager distributed the reports to the tenants, as they alone are responsible for operating the sites and therefore for taking corrective action.

Describe how you ensure that material ESG risks are adequately addressed in the real estate investments where you hold a minority stake.

Our real estate strategy adopts a "Best-in-Progress" approach. We focus on improving the ESG performance of our properties rather than acquiring properties that are already performing well. We enhance the value of our properties by taking actions to improve their ESG performance. This involves levers relating to the use, maintenance and operation of the assets. The actions are undertaken in close collaboration with tenants and technical staff. For assets where we are a minority shareholder, we carry out an ESG assessment which we follow on our side even though we are minority shareholders.

Describe how your ESG action plans are currently defined, implemented and monitored throughout the investment period.

Depending on the technical due diligence, we look at what needs to be done as well as with the help of our ESG grid we can compare the ESG performance of our assets with previous years results, identify areas for improvement, and define appropriate action plans. For each acquisition of a "Best-in-Progress" asset, a multi-year action plan and a dedicated budget integrated into the fund's CAPEX are defined with the aim of improving the asset's initial ESG rating.

During the reporting year, how did you or the organisations operating on your behalf engage with the local community above and beyond what is required by relevant regulations for asset design, use and/or repurposing?

We have environmental annexes to each new contract, which commits to the establishment of a Green Committee that meets every year. Through these Green Committees, we engage with the building tenants, property managers and we raise awareness on ESG topics, such as encouraging efficient use of energy, water and recycling and providing them a best practice guide. We have also set ourselves the objective of drawing up a “Charte de chantier vert” for all buildings under construction to ensure that companies and their subcontractors involved in construction or renovation operations commit to a procedure for reducing site nuisances. The aim of the charter is to meet the requirements of sustainable development in the building industry and to reduce as much as possible the impact of the work on the workers, the neighbourhood and the environment. In the event of failure to comply with the provisions of this charter, the company concerned may be held liable and penalties will be applied.

(A) Process one

Investing in biodiversity protection at our wind farms

The monitoring and prevention of collision risks of flying fauna, birds and bats, on wind turbines have become major issues. After having witnessed several bird and bat fatalities and being aware of the importance of protecting biodiversity around our projects, we decided to use the services of specialized companies developing, installing and operating artificial intelligence-based wildlife detection systems for wind farms. We have worked together with the company Biodiv-wind to install their solution SafeWind®. The system detects moving targets around wind turbines and sends a signal to automatically stop the turbines in case of potential collision. So far, the installation of this solution has proven to be beneficial and we installed the system on other wind farms in 2022, where the monitoring of bird activity has detected potential threats toward bird life.

(B) Process two

Social positive impacts at our new photovoltaic projects in Northern France with a total capacity of 77MW.

The projects have generated jobs during the construction and operation phases. In addition, they contribute to the budget of local authorities through taxes and the entities will benefit from economic spin-offs. The infrastructure has been adapted and is compatible with agricultural activity: panels will be installed at a minimum height of 0.8m (instead of 0.6m) to allow sheep to graze. A specific agreement has been signed with a shepherd on the Goussaincourt site.

INF 13	PLUS	OO 21	N/A	PUBLIC	Monitoring	2

Describe how your ESG action plans are defined, implemented and monitored throughout the investment period.

The investment time horizon for our investments in real assets is long, and our influence on projects is considerable; we usually take majority ownership positions. As a result, ESG analysis is a key part of our due diligence process, and an assessment of the impact of these assets on key sustainability objectives is important. KPIs are collected on an annual basis for projects, using the Sustainable Development Goal (SDG) framework to identify those that are most material and objectives are agreed over time to align the projects to more meaningfully contribute towards the achievement of the SDGs.

For each project in our pipeline, we evaluate the positive impact it could have against the relevant SDGs, and we weight this against the negative impacts and how well we believe these can be managed and minimised.

Once a project passes this initial evaluation and the team progress to invest, we outline these SDGs in the investment memorandum, explaining in further detail how we can quantify the positive impact and manage externalities. Once invested, we complete an evaluation against these material SDGs, and commit to KPIs to monitor regularly and report on an annual basis.

Describe up to two initiatives adopted as part of your ESG competence-building efforts at the asset level during the reporting year.

(A) Initiative one

Our motorway construction project in France is committed to implementing the latest innovations in terms of carbon footprint reduction: recycled materials, low-carbon materials, limiting external sourcing. For example, temporary pits for materials will not be necessary due to the in-depth knowledge of the geology of the land and the reuse of construction materials, significantly reducing the environmental footprint and the deterioration of land. Prefabricated elements will be more locally sourced allowing a considerable reduction in the volume of concrete poured on site and greater optimisation of the concrete in the prefabrication plant, as well as promoting the ecosystem of regional and local companies. Moreover, important measures to protect biodiversity have been implemented with a complete fauna/flora study carried out between 2019 and 2020, the motorway's route has been optimised to avoid the areas of major ecological concern on its path.

The constructor modified the route to avoid four areas of high environmental concern. They defined the final route using optimisation methods which made it possible to safeguard 80 ha of agricultural and natural land compared to the studies previously carried out by the administration. The project includes 155 structures favourable to small fauna and 24 structures for large fauna which will ensure ecological continuity and preserve biodiversity. The project has planned to plant 400 trees to replace the 200 trees impacted by the motorway construction, a net gain of +200 trees, moreover it has planned to plant 5 X more trees and grove than the trees and groves that were cut.

(B) Initiative two

We try to find synergies with our assets. For example, we considered it important for our data centres to source energy from renewable sources to significantly reduce their environmental footprint and created a PPA with one of our portfolio wind farms. The terms of this contract create value for the wind farm, which sells its electricity at a higher price than it was guaranteed by the public PPA it has terminated and at the same time the data centre was able to secure a supply of energy at a stable price in the medium term, at a time when the electricity market, destabilised by the energy crisis, had led some energy companies, through windfall effects, to impose unacceptable prices on their customers.

STAKEHOLDER ENGAGEMENT

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
INF 15	PLUS	OO 21	N/A	PUBLIC	Stakeholder engagement	1, 2

How do you ensure that appropriate stakeholder engagement is carried out during both due diligence for potential investments and the ongoing monitoring of existing investments?

Our infrastructure funds invest in real assets over the long term by holding significant rights in the governance of portfolio companies, a situation that enables them in particular to exert their influence on ESG aspects. ESG analysis is a key part of the due diligence process, and assessing the impact of its assets in terms of sustainability is important. When negative impacts on sustainability factors are identified, the fund engages in the search for solutions with the assets concerned, in order to reduce the identified impacts or even neutralise and/or compensate for them.

We engage with local communities to understand potential negative impacts of assets, and when needed we find active solutions to compensate for any changes. For example, we had to reconfigure a wind farm where the environmental permit initially provided for the construction of three turbines, after facing a strong local opposition to one of the turbines (that turbine would have been located in the vicinity of houses, and in order to build it, some trees would have had to be felled). We decided to remove it from the project and instead increased the power and height of the two remaining turbines. In the end, the modified park's output is equivalent to that initially expected from three turbines
